1.0 Introduction

This bibliography presents selected works, published between 1992 and the present, that are useful in understanding network-based electronic publishing. Key sources that deal with related topics, such as digital libraries, intellectual property rights, the NII and the NREN, and network software tools, are also included. It does not provide detailed coverage of the large body of literature that deals with general electronic publishing topics.

The citation for the first part of this bibliography, which was previously published in The Public-Access Computer Systems Review, is included below.
