

POULTRY ASSOCIATION ORGANIZED AT TUCSON

Because of the many serious problems confronting the rapidly growing poultry industry of the Tucson district, definite steps have been taken to form an organization to meet and overcome these retarding factors that are working to the detriment of the poultry men.

The preliminary step toward the formation of this important organization was taken on Friday night, Jan. 9, when a group of the leading poultry men of the district met and organized a temporary association. At the next meeting a week later this organization was made permanent and the officers for the association were elected. Niel Haga is the president, and Mrs. H. L. Wilkerson, the secretary.

At this last meeting several of the prominent poultry men spoke of the value of cooperation and the necessity of standardization of egg marketing in Tucson. One of their chief objects is to supply the Tucson housewives with graded eggs.

In order that the problem that has confronted the poultrymen during the season of peak production, due to lack of storage facilities in the past, ar-

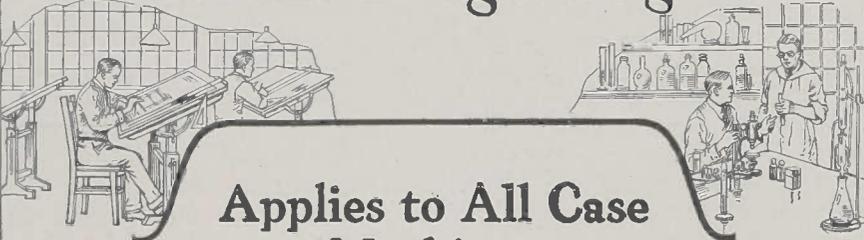

rangements to store excess production during the summer months is now under way with the local ice plant. In the future a close watch is to be kept on the government bulletins and on the daily egg quotations, so that a price may be realized that is fair to both the consumer and producer.

The organization has allowed no time to elapse in the beginning of its functions, it already has the earnest support of the poultry department of the University of Arizona, and is asking for the support of the local business men and consumers as a

means of developing this fast growing industry to a point where the local poultrymen may supply the great volume of poultry produce shipped in here from outside the state.

On account of the high price of corn, the Chicago market has been flooded with hogs, a large percentage of which were light in weight, averaging 200 pounds and under. For the week ending December 6, the receipts were 383,000 head, the largest on record.

The CASE Engineering Code

Applies to All Case Machines

THE Case Engineering Code takes definite, accurate information obtained from special, dependable sources, analyzes it month by month, charts it, and applies its findings to the continuous improvement and development of all Case machines.

There is a scientific reason, based upon accurate knowledge, for every detail of Case machine construction. The steel frame of the thresher; the fact that every rotating bearing on the thresher is self aligning; the extensive use of special alloy steels and protected bearings in the tractor; the remarkable economy records made by Case steam engines—all had their origin in the Case Engineering Code.

The results of the operation of the Code are apparent in the better work done by Case machines, their greater dependability and durability and their economy as demonstrated in low cost per year or per job. This is the only system of development ever devised that insures steady progress toward perfection, and it is applied to every part throughout all Case machines.

J. I. Case Threshing Machine Co.

(Established 1842)
Dept. B75 Racine, Wisconsin

Case Farm Tractors, Steel Threshers, Silo Fillers, Baling Presses, Steam Engines, Road Machinery, Grand Detour Plows and Disc Harrows

NOTE— Our plows and harrows are NOT the Case plows and harrows made by the J. I. Case Plow Works Company

SUCCESS

is not luck, nor a pull, nor a soft snap—but the longest, steadiest, toughest job you ever tackled. We are striving for **SUCCESS**.
