

Special Issue Acknowledgments

The guest editor and authors would like to thank the sponsors of this special issue. Without their support, this project would still be an idea.

The USDA National Institute of Food and Agriculture’s mission is to advance knowledge for agriculture, the environment, human health and well-being, and communities by supporting research, education, and extension programs in the Land-Grant University System and other partner organizations.

The University of Wyoming’s College of Agriculture and Natural Resources is a proactive leader in education and scholarship in support of healthy, sustainable systems for agriculture, environment and natural resources, rural communities, and related life sciences.

The Range Science Education Council promotes ecologically sound management of rangelands by advising educational institutions, government agencies and any other group desiring assistance in training people who are involved with management of the world's rangelands.

The University of Arizona’s School of Natural Resources and the Environment addresses grand challenges in environmental sciences by integrating across the boundaries of biology, physical science, resource management, and international resource issues.

North Dakota State University’s Natural Resources Management program prepares students for careers that require an understanding of the social, biological, and physical aspects of managing natural resources for their highest and best uses for society while maintaining the integrity of natural systems.

Oklahoma State University’s Natural Resource Ecology and Management program is the premier source of cutting-edge research, instruction, and outreach on fisheries, forestry, rangelands, wildlife, and fire ecology for students, landowners, and land managers and promotes the sustainable and ecological management of natural resources.

South Dakota State University’s Department of Natural Resource Management faculty members aspire to attain national distinction both in undergraduate and graduate education and as leaders in natural resource research, and to provide indispensable service to the people of the Northern Great Plains related to contemporary natural resource management issues.

The University of Wyoming’s Ecosystem Science and Management program develops the scientific foundation for management of natural resources, communicates scientific knowledge and judgment to stakeholders through extension and service, and trains the next generation of natural resource managers and scientists.
