# OCAMS Absolute Color Cal and Non-Linearity Cal, OVIRS Solar Cal, OpNav with ridealong Particle Imaging WOY 45

We are HERE

October 30, 2019  
 L+1147 days  
 Earth Range = 268,000,000 km (1.79 AU) (↑)  
 Sun Range = 190,000,000 km (1.27 AU) (↓)  
 Bennu Range = 1.6 km (Orbit-R insertion this week)  
 Sun-Probe-Earth Angle = 33.3 deg (↓)  
 One Way Light Time = 00:14:55 hh:mm:ss (↑)  
 Round Trip Light Time = 00:29:50 hh:mm:ss (↑)

# Uplink Summary

---

## UPLINK

### WOY 45 (DOY 308-315 / Nov 4-Nov 11, 2019)

- BG Seq, Sci Genies, ATFs, Payload Sequences [uplinked 2019-305](#)

### Ephemeris Updates

- OD-200 [uplinked on DOY 2019-309](#)

### Other Files

# Execution Summary

---

## Executed (times in UTC):

- 2019/308 (Monday, Nov 4) – 2019/309 (Tuesday, Nov 5)
  - OpNav with particle imaging riding along
    - # of NavCam OpNav images expected/received : 9 / 9
    - # of NavCam Particle images expected/received: 18 / 18
  - OCAMS Absolute Color Cal #1 / #2
    - # of MapCam images expected/received: 78 / 78
- 2019/309 (Tuesday, Nov 5) – 2019/310 (Wednesday, Nov 6)
  - OpNav with particle imaging riding along
    - # of NavCam OpNav images expected/received : 9 / 9
    - # of NavCam Particle images expected/received: 18 / 18

## Up Next (times In UTC):

- 2019/310 (Wednesday, Nov 6) – 2019/311 (Thursday, Nov 7)
  - OpNav with particle imaging riding along
    - # of NavCam OpNav images expected/received : 9 /
    - # of NavCam Particle images expected/received: 18 /

**\*\* NOTE: we do not have an HGA pass on Thursday DOY 311. Images will downlink on DOY 312.**

- 2019/311 (Thursday, Nov 7) – 2019/312 (Friday, Nov 8)
  - OpNav with particle imaging riding along
    - # of NavCam OpNav images expected/received : 9 /
    - # of NavCam Particle images expected/received: 18 /
- 2019/312 (Friday, Nov 8) – 2019/313 (Saturday, Nov 9)
  - OpNav with particle imaging riding along
    - # of NavCam OpNav images expected/received : 9 /
    - # of NavCam Particle images expected/received: 18 /
  - OCAMS Non-Linearity
    - # of SAMCAM images expected/received: 60 /
    - # of MAPCAM images expected/received: 60 /
    - # of POLYCAM images expected/received: 60 /

# Need for Retransmit? Need for Replay?

---

## DOY 207

- ~8 frames of data from DOY 307 will not be retransmitted due to the frame count being less than retransmit limit

# List of Unexpected Alarms, Watch Items, ISAs, PFRs

---

## Unexpected Alarms

- None

## New or Updated Watch Items, ISA's and PFR's

- **ISA # 12047 Single Corrupted TAGCAMS NavCam 1 Image**
  - ISA Status: In Progress
  - ISA Type: Spacecraft Minor
  - ISA Criticality: 3 – Minimal impact
- **ISA # 11980 No 2-way Doppler Tracking after M3R maneuver in Recon-A**
  - ISA Status: In Progress
  - ISA Type: Ground Minor
  - ISA Criticality: 2 – Significant impact
- **ISA # 11464 Maneuver Automation froze after executing PEF Gen- M30D Late Update**
  - ISA Status: In Progress
  - ISA Type: Ground Minor
  - ISA Criticality: 3 – Minimal impact
- **ISA # 11268 IMU1 Configuration Issue**
  - ISA Status: In Progress
  - ISA Type: Spacecraft Major
  - ISA Criticality: 2 – Significant impact

# Science Status and/or PI Status

---

## Reminders, Go Backs...

---

- **No Science Weekly tomorrow**
- **Daily Downlinks are now on a Monday / Wednesday / Friday schedule**

- **REXIS (Maddy) – Off and nominal!**

# SPOC Watch Item List

Todays Date: 10/11/2019		SPOC Watch Item List									
Status	Date Added	Date Removed	Item ID	Instrument	Title	Watch Item Description	Impact Type	Watch Item Age	ISA # or TCR #	Watch Item Action	Watch Item Action Plan
Open	4/3/18		Item10	OLA	OLA T0 Intensity	L+10 day, L+6 mo, and L+10 mo On-orbit checkouts showed that OLA's T0 signal intensity (Return Intensity) is an order of magnitude lower than expected as compared with pre-launch spacecraft and stand-alone test data. The L+18 calibrations revealed that the T0 intensity is at pre-launch levels on both the Gold and Silver sides of OLA. SPOC has opted to close ISA 2257 and continue to monitor T0 intensity as a watch item.	Instrument Performance	556		Watch	Monitor the T0 Intensity at the L+22 and L+30 OLA checkouts Update 08/06/2018: Based on results from L+18 and L+22, OLA has not been able to discern a temperature dependency with t0 Intensity value. We will continue to watch, but may never fully understand the cause. OLA can still operate as expected despite the inconsistency seen in the t0 value. Update 5/9/2019: The OLA Team continues to monitor the T0 intensity. Since it was first detected, the behavior of the HELT laser has remained constant through Orbital A and Detailed Survey. At this time, our recommendation is to maintain this item on the watch list through (at least) Orbital-B so as to observe behavior of the second laser (LELT).
Open	9/5/18		Item11	OCAMS	OCAMS Error on Polyacam Startup	During power on of the OCAMS cameras there is the possibility of a 4 byte packet being created due to line noise. SPOCFLIGHT is unsure what to do with this packet, so flags it as an error. So far this has only occurred twice during flight, both times with Polycam but it is possible this could occur with any of the OCAMS cameras. As OCAMS has only been used sparingly during Cruise, it is not certain how frequently this error will occur.	Instrument Performance	401		Watch	Will monitor for future occurrences across all of the OCAMS cameras and assess if any action is warranted.  Update 5/7/2019: We are continuing to monitor this behavior. We have seen this issue crop up all when powering on PolyCam.

# Anomaly Response & Status

ISA #	Date Created	Type	Priority	Title	Detailed Description - Action Plan	Notes	Status	Resolved Date	Need Date
11575	10/3/19	Ground Minor	Normal	Sequence Collision in WOY 41 SoftSim run	The DOY 285 preliminary SoftSim run indicated a sequence collision between ocm_rcn_19285_dl06_002 and ocm_rcn_19285_028. The J-Asteroid plan showed an 1.6 second margin between these two sequences. The OLVM run showed 3 seconds margin between the two sequences. The SoftSim run showed a 0.1 second overrun of the first sequence therefor not loading the second sequence.		New	TBD	TBD
11287	9/9/19	Ground Minor	Normal	Incorrect Spacing Between OVIRS BPM Update Sequences	During review of the OVIRS bad pixel map update, it was discovered that one of the OVIRS BPM sequences needed to be rebuilt for a pass 2 cycle. This update resulted in a change to the sequence execution duration which was not communicated to the MSA. This drove a change to the OVIRS BPM activity sequence built by the MSA to prevent sequence collisions during the activity as a result of the longer execution duration. When the correct runtime was presented by the SPOC, the MSA interpreted the sequence runtime without the original 2-minute padding planned during the activity at kickoff.		In Progress	TBD	TBD
11268	9/5/19	Spacecraft Major	Normal	IMU1 Configuration Issue	During MIMU procurement on the LUCY program, it was found that the OSIRIS-REx IMU1 (S/N 502) was loaded with an incorrect Built-In-Test (BIT) parameter file at Honeywell prior to delivery to Lockheed Martin. This file defines the bit mapping of the MIMU status word. The status word contains a set of bits that are set high in the presence of various errors detected internally by the MIMU when performing Built-In-Tests.		In Progress	TBD	TBD
11196	9/2/19	Spacecraft Minor	Normal	TAGCAMS: (09/02/19) Aliveness and Low Speed Sync Search	Approximately 35 minutes after the weekly power-cycle completed on DoY 2019-245 several counts on were taken on the TAGCAMS low speed sync search. These errors resulted in an aliveness count. As this error occurred after the nominal daily TAGCAMS DVR management and prior to any nominal usage there should be no missing or corrupted image data due to this upset (from the prior day, and none expected for the upcoming day).		In Progress	TBD	TBD
10979	8/7/19	Ground Minor	Normal	Delayed reconstructed CK delivery on a Crit 2 OpNav Downlink day	There was a delay in receipt of the reconstructed CK on DOY 217 08/05/19 during a Criticality 2 OpNav Downlink day.		In Progress	TBD	TBD
10939	8/2/19	Spacecraft Minor	Normal	REXIS SXM recording significantly fewer counts	During Orbital B operations (starting Jul 1 2019) the REXIS Solar X-ray Monitor (SXM)		Monitor	TBD	TBD
7704	1/10/19	Spacecraft Major	Normal	Potential particles detected in NavCam images while in Benuu Orbit-A Phase	Investigation and detailed image analysis are underway to determine if particles detected in a pair of NavCam images taken on 01/06/19 may have originated from Benuu (or from other causes such as cold traps on the spacecraft, cosmic rays, etc.) MPB convened to determine if it was safe for the spacecraft to remain in orbit and agreed to remain in orbit but to collect more data for the remaining weeks of the orbit phase as a precaution. The details of the additional and more efficient and targeted observations are being worked.		Monitor	TBD	TBD
7518	1/4/19	Ground Major	High	CenturyLink National Outage	A nationwide CenturyLink outage did not allow normal ground activities for OSIRIS-REx including uplink, downlink, and moving data between elements. Outage Start December 27, 2018 08:40 GMT Outage Stop December 29, 2018 10:12 GMT Approximately 50 hours		In Progress	TBD	TBD

# Current ISA Status
