 Originating Site:CDSCC Controlling Site:CDSCC

A series of "Lost Contact with Workstation" log entries indicated the start of the issue. A number of TDN blocks stopped as monitor data was lost. Subsystems failed to respond to a "Hi". A restart of the CE by Goldstone TSM restored functionality.

Need for Retransmit? Need for Replay?

DOY 207

- ~8 frames of data from DOY 307 will not be retransmitted due to the frame count being less than retransmit limit

SPOC Systems Issue Status – DOY 312

- **SPOC SA's working to restore systems after experiencing some problems on DOY 311 with the file mapping on one of our main file servers (orfs4)**
 - All Systems should now be up, incl.: Mattermost, GIT, JIRA, SPOCFlight, J-Asteroid, IPWG machines at main campus
- **Folks may notice some slowness as the systems come back up. Please be patient!**

List of Unexpected Alarms, Watch Items, ISAs, PFRs

Unexpected Alarms

- **DOY 310: DTC1AS3_IN4 (interrupt request counter) was RED HIGH (10).** SCT confirms this is sometimes seen during the execution of the TAGCAMS reset. The alarm file has been updated to notify us the next time we see this count.

New or Updated Watch Items, ISA's and PFR's

- **ISA # 12047 Single Corrupted TAGCAMS NavCam 1 Image**
 - ISA Status: In Progress
 - ISA Type: Spacecraft Minor
 - ISA Criticality: 3 – Minimal impact
- **ISA # 11980 No 2-way Doppler Tracking after M3R maneuver in Recon-A**
 - ISA Status: In Progress
 - ISA Type: Ground Minor
 - ISA Criticality: 2 – Significant impact
- **ISA # 11464 Maneuver Automation froze after executing PEF Gen- M30D Late Update**
 - ISA Status: In Progress
 - ISA Type: Ground Minor
 - ISA Criticality: 3 – Minimal impact
- **ISA # 11268 IMU1 Configuration Issue**
 - ISA Status: In Progress
 - ISA Type: Spacecraft Major
 - ISA Criticality: 2 – Significant impact

Reminders, Go Backs...

- **Daily Downlink cancelled Monday, Nov 11 for the Veteran's Day Holiday.**
Many thanks to all our Veterans and their families!
- **REMINDER: Daily Downlinks are now on a Monday / Wednesday / Friday only**

Backup

Instrument Weekly Status

- **OCAMS (Bashar) – On and nominal!**
- **OLA (“All IEs”) – Off and nominal!**
- **OTES (Chris) – Off and nominal!**
- **OVIRS (Amy) – Off and nominal!**
- **REXIS (Maddy) – Off and nominal!**

SPOC Watch Item List

Todays Date: 11/01/2019		SPOC Watch Item List									
Status	Date Added	Date Removed	Item ID	Instrument	Title	Watch Item Description	Impact Type	Watch Item Age	ISA # or TCR #	Watch Item Action	Watch Item Action Plan
Open	4/3/18		Item10	OLA	OLA T0 Intensity	L+10 day, L+6 mo, and L+10 mo On-orbit checkouts showed that OLA's T0 signal intensity (Return Intensity) is an order of magnitude lower than expected as compared with pre-launch spacecraft and stand-alone test data. The L+18 calibrations revealed that the T0 intensity is at pre-launch levels on both the Gold and Silver sides of OLA. SPOC has opted to close ISA 2257 and continue to monitor T0 intensity as a watch item.	Instrument Performance	577		Watch	Monitor the T0 Intensity at the L+22 and L+30 OLA checkouts Update 08/06/2018: Based on results from L+18 and L+22, OLA has not been able to discern a temperature dependency with t0 Intensity value. We will continue to watch, but may never fully understand the cause. OLA can still operate as expected despite the inconsistency seen in the t0 value. Update 5/9/2019: The OLA Team continues to monitor the T0 intensity. Since it was first detected, the behavior of the HELT laser has remained constant through Orbital A and Detailed Survey. At this time, our recommendation is to maintain this item on the watch list through (at least) Orbital-B so as to observe behavior of the second laser (LELT).
Open	9/5/18		Item11	OCAMS	OCAMS Error on Polyacam Startup	During power on of the OCAMS cameras there is the possibility of a 4 byte packet being created due to line noise. SPOCFLIGHT is unsure what to do with this packet, so flags it as an error. So far this has only occurred twice during flight, both times with Polycam but it is possible this could occur with any of the OCAMS cameras. As OCAMS has only been used sparingly during Cruise, it is not certain how frequently this error will occur.	Instrument Performance	422		Watch	Will monitor for future occurrences across all of the OCAMS cameras and assess if any action is warranted. Update 5/7/2019: We are continuing to monitor this behavior. We have seen this issue crop up all when powering on PolyCam.

Anomaly Response & Status

ISA #	Date Created	Type	Priority	Title	Detailed Description - Action Plan	Notes	Status	Resolved Date	Need Date
12047	9/13/19	Spacecraft Minor	Normal	Single Corrupted TAGCAMS NavCam 1 Image	One TAGCAMS NavCam 1 image out of 165 images taken on September 13, 2019 was significantly corrupted. Initially it appeared to be due to missing packets and nothing out of the ordinary but further investigation by the SPOC and MSA teams found inconsistencies which are still not fully understood.		In Progress	TBD	TBD
11287	9/9/19	Ground Minor	Normal	Incorrect Spacing Between OVIRS BPM Update Sequences	During review of the OVIRS bad pixel map update, it was discovered that one of the OVIRS BPM sequences needed to be rebuilt for a pass 2 cycle. This update resulted in a change to the sequence execution duration which was not communicated to the MSA. This drove a change to the OVIRS BPM activity sequence built by the MSA to prevent sequence collisions during the activity as a result of the longer execution duration. When the correct runtime was presented by the SPOC, the MSA interpreted the sequence runtime without the original 2-minute padding planned during the activity at kickoff.		In Progress	TBD	TBD
11268	9/5/19	Spacecraft Major	Normal	IMU1 Configuration Issue	During MIMU procurement on the LUCY program, it was found that the OSIRIS-REx IMU1 (S/N 502) was loaded with an incorrect Built-In-Test (BIT) parameter file at Honeywell prior to delivery to Lockheed Martin. This file defines the bit mapping of the MIMU status word. The status word contains a set of bits that are set high in the presence of various errors detected internally by the MIMU when performing Built-In-Tests.		In Progress	TBD	TBD
10939	8/2/19	Spacecraft Minor	Normal	REXIS SXM recording significantly fewer counts	During Orbital B operations (starting Jul 1 2019) the REXIS Solar X-ray Monitor (SXM)		Monitor	TBD	TBD
7704	1/10/19	Spacecraft Major	Normal	Potential particles detected in NavCam images while in Benu Orbit-A Phase	Investigation and detailed image analysis are underway to determine if particles detected in a pair of NavCam images taken on 01/06/19 may have originated from Benu (or from other causes such as cold traps on the spacecraft, cosmic rays, etc.) MPB convened to determine if it was safe for the spacecraft to remain in orbit and agreed to remain in orbit but to collect more data for the remaining weeks of the orbit phase as a precaution. The details of the additional and more efficient and targeted observations are being worked.		Monitor	TBD	TBD

Current ISA Status

#	Status	Priority	Subject	Assignee	Updated
