

Announcement

Notice of Grant Funding Availability

The Barringer Family Fund for Meteorite Impact Research is pleased to announce the availability of grant funding for 2003. Established in 2001 to encourage research in the area of impact cratering, this fund supports field work by masters, doctoral, and post-doctoral students. A small number of competitive grants in the range of \$2500–\$5000 will be awarded for field research at known or suspected meteorite impact sites worldwide. Grant funds will be provided to assist with travel and subsistence costs, as well as laboratory and computer analysis of research

samples and findings. Application proposals must be submitted by 1 April 2003, with funding notifications announced by 31 May 2003. Interested persons are strongly encouraged to apply electronically via The Barringer Family Fund for Meteorite Impact Research website in care of the University of Arizona's Lunar and Planetary Laboratory website: <http://www.lpl.arizona.edu>. For further information about the application process,

please contact Dr. David A. Kring at the Lunar and Planetary Laboratory: kring@lpl.arizona.edu.

Erratum

Queen Alexandra Range 93148: A new type of pyroxene pallasite?

In the above named article by C. Floss, which appeared in vol. 37 (2002), pp. 1129–1139, the Zr abundances shown on the y-axis of Fig. 2d are a factor of 10 too low. Instead of 0, 100, 200, and 300 ppb, the correct scale should read 0, 1000, 2000, and 3000 ppb. The discussion and conclusions of the paper are not affected by this error.
