### **Shock waves—Phenomenology, experimental, and numerical simulation**

In the above-named article by K. Thoma et al., which appeared in vol. 40 (2005), pp. 1283–1298, two figures were improperly credited. Figure 13 (p. 1287) is taken from “Elektronenmikroskopischer Nachweis amorpher Bereiche in stosswellenbeanspruchtem Quarz” by Wolfgang F. Müller, published in *Die Naturwissenschaften* in 1969. Figure 14 (p. 1287) is taken from “Stosswelleneffekte in den Mondproben,” by Wolfgang F. Müller, published in issue 11 of *Umschau* in 1970. Figure 14 is a color micrograph of olivine imaged with crossed polars, not plane-polarized light, as was stated in Thoma et al.
