Research Papers

- 121 Evaluating changes in horse behavior as a response to small unmanned aerial vehicles**
Ryan G. Howell, Kaylee Draughon, Haley Johnston, Melissa Myrick, Val J. Anderson, Dennis L. Eggett, Steven L. Petersen
- 129 Seed mix performance and cheatgrass suppression on arid rangelands**
Charlie D. Clements, Dan N. Harmon, Robert R. Blank

Forums

- 136 Grazing management on commercial cattle ranches: Incorporating foraging ecology and biodiversity conservation principles**
Richard Fynn, Japie Jackson
- 148 Economic, social, and environmental impacts of cattle on grazing land ecosystems**
Amber Oerly, Myriah Johnson, Jessica Soule

Book Review

- 157 Black Cowboys in the American West: On the Range, On the Stage, Behind the Badge**
Tip Hudson

Departments

- 159 Browsing the Literature**
Matt Germino

Front Cover: Zebra and cattle grazing on a floodplain in the Okavango Delta, Botswana during the late dry season (October). The late dry season is the hottest and driest time of the year where grasses in drylands are senescent and of lowest quality but on floodplains remain green and high-quality. Floodplains, therefore, are excellent dry season ranges for wild and domestic herbivores but freedom for herbivores to select these functional dry season ranges can be restricted by fencing and land use change (photo credit: Richard Fynn)
